

FRACKTAL TWIN DRAGON

Twice the power, half the time

Twin Dragon brings the IDEX technology allowing you to print in Two-Color Printing, Dual-Material Printing, Duplication Printing, Mirror Printing. Soluble Supports. This solution is designed to improve productivity and reduce printing time. With IDEX Technology, Twin Dragon also prints a wide range of composite materials including chopped carbonfibre reinforcement along with polymer.

KEY SPECIFICATIONS

Maximum Build Volume	600 x 600 x 400mm
Print Speed	Upto 500 mm/sec
Filament Diameter	1.75mm
Nozzle Temperatures	Upto 300 °C
Build Plate Temperature	Max 150 °C
Print Modes	Single, IDEX Mirrored, Duplication, Dual Material

IDEX
Independent Dual Extruder

5" Touchscreen HMI

Available Variants	Twin Dragon 300	Twin Dragon 500	Twin Dragon 600
Maximum Build Volume	300 x 300 x 400mm	400 x 400 x 400 mm	600 x 600 x 400 mm
Print Speed	500mm/sec	400mm/sec	300mm/sec
Power rating	1000W	1250W	1750W
Net Weight	150 kg	150 kg	200 kg

Flawless 3D Prints Everytime

Printed on Fracktal Work's Twin Dragon 3D Printer

DETAILED SPECIFICATIONS

FRACKTAL WORKS TWIN DRAGON SERIES INDUSTRIAL 3D PRINTER

Maximum Build Volume	Up to 600 x 600 x 400 mm	Connectivity	USB, Wifi, Ethernet
Power Rating	1750W	Filament Runout Detection	Yes
Build Speed	Upto 500mm/sec	Supported Materials	PLA, ABS, FLEX, PETG, PC CF Nylon, TPU
User Interface	5" Capacitive Touch Panel	Nozzle Temperatures	Upto 300 °C
Tool Changer	IDEX - Independently Dual Extrusion	Heated Chamber	Fully Enclosed Passive Chamber
Filament Diameter	1.75mm	Net Weight	200 Kg
Nozzle Diameter	0.4mm, 0.6mm, 0.8mm 1.0mm, 1.2mm	Built Plate Temperature	150 °C
		Networking	Remote Monitoring System

How FDM 3D Printing works?

Our 3D printers use FDM (Fused Deposition Modeling) technology, a reliable and efficient method to turn digital designs into tangible parts. Here's how it works:

**Design**

The process begins with your 3D model, created in CAD software, which defines the shape and details of the part.

**Slicing**

The design is divided into thin, flat layers by slicing the software, creating a printable blueprint.

**Layer-by-Layer Printing**

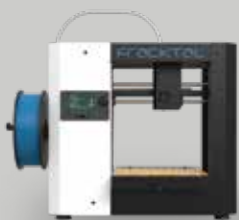

The printer moves precisely, depositing the material layer upon layer. Each layer fuses with the one below, gradually forming the object.

**Final Product**

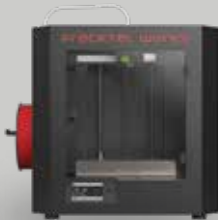

Once all layers are printed, the object is complete, showcasing intricate details and complex shapes achievable only through layering.
